90+

A black and white photograph showing a massive pile of discarded car tires. The tires are stacked haphazardly, filling the frame from edge to edge. They are all oriented the same way, with the tread pattern facing towards the left. The lighting creates strong highlights and shadows on the rubber surface, emphasizing the texture and depth of the stack.

Beste J.,

Bij VakantieVeilingen doen we er alles aan om het bieden zo leuk en veilig mogelijk te maken. Uit onze systemen is helaas naar voren gekomen dat er mogelijk door iemand anders is geprobeerd in te loggen op jouw account.

Bij deze inlogpogingen wordt gebruikt gemaakt van zogenaamde “**credential stuffing**”. Hierbij misbruiken derden elders onbevoegd verkregen inloggegevens en proberen daarmee in te loggen. Veel mensen gebruiken altijd dezelfde combinatie van e-mailadres en wachtwoord voor verschillende sites. Als een onbevoegde derde dan op één of andere manier deze wachtwoorden in zijn bezit krijgt, dan kunnen ze proberen of ze toevallig op een andere site met dezelfde gegevens kunnen inloggen en dat is bij jouw account ook gebeurd.

Het is daarom helaas mogelijk dat de inlogpoging bij VakantieVeilingen gelukt is en dat informatie over jou, waaronder gegevens die je hebt opgegeven in je account, toegankelijk zijn geweest voor iemand anders dan jezelf.

Het gaat om de door jou ingevulde voor- en achternaam, adresgegevens, telefoonnummer, geboortedatum, e-mailadres en als je die bij ons hebt opgegeven ook je IBAN. Er zijn vanuit jouw account geen verdachte transacties op ons platform waargenomen.

Om er zeker van te zijn dat niemand meer bij je gegevens kan, hebben we je wachtwoord gereset. Je moet dan voordat je weer kunt inloggen, eerst een nieuw wachtwoord kiezen. Dat kan via onderstaande link. Let erop dat je kiest voor een uniek en sterk wachtwoord dat je niet gebruikt op andere websites. Daarnaast blijven wij continu andere technische en organisatorische maatregelen nemen om de ongeautoriseerde inlogpogingen van derden tegen te houden.

[Je wachtwoord wijzigen](#)

Wij hebben dit incident gemeld bij de Autoriteit Persoonsgegevens. Voor eventuele verdere vragen kun je het beste mailen naar [wachtwoordreset@emesa.nl](mailto:wachtwoordreset@emesa.nl) of contact opnemen met de klantenservice.

Wees de komende tijd extra alert op fraude en identiteitsdiefstal. Kijk voor meer info op <https://www.fraudehelpdesk.nl>.

Bedankt voor je begrip. We zien je graag weer terug op onze website!

Rise in phishing attacks in 201

**Twitter Support**  @TwitterSupport · Jul 31, 2020 

Replies to @TwitterSupport

The attack on July 15, 2020, targeted a small number of employees through a **phone spear phishing attack**. This attack relied on a significant and concerted attempt to mislead certain employees and exploit human vulnerabilities to gain access to our internal systems.

**Twitter Support**  @TwitterSupport

By obtaining employee credentials, they were able to target specific employees who had access to our account support tools. They then targeted 130 Twitter accounts - Tweeting from 45, accessing the DM inbox of 36, and downloading the Twitter Data of 7.

**Nieuws**

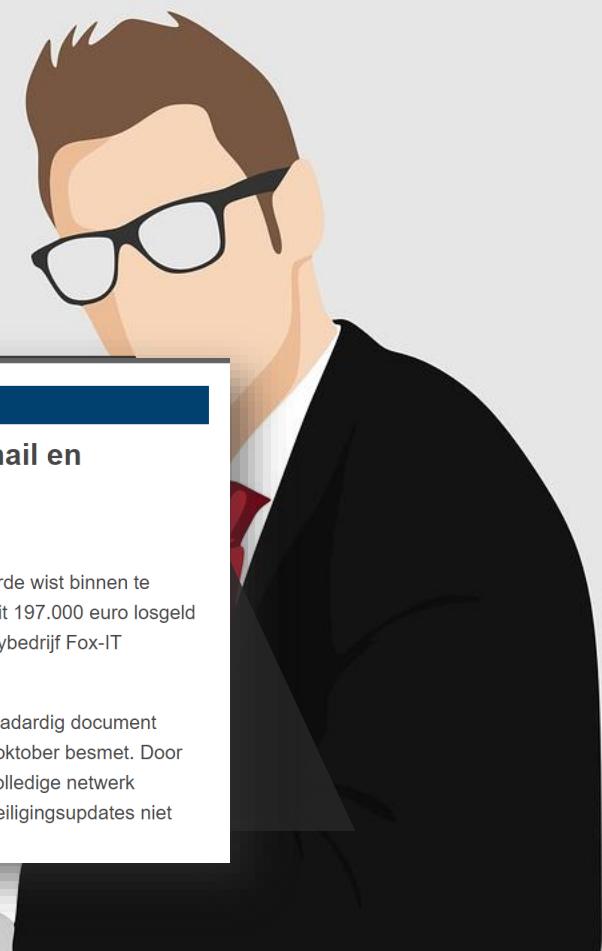

**Universiteit Maastricht werd besmet via phishingmail en verouderde software**

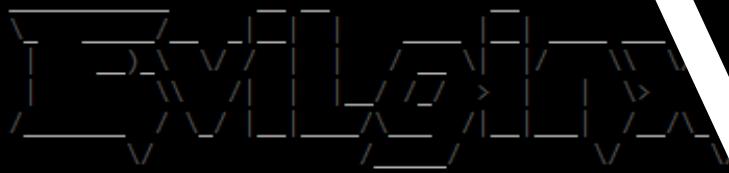

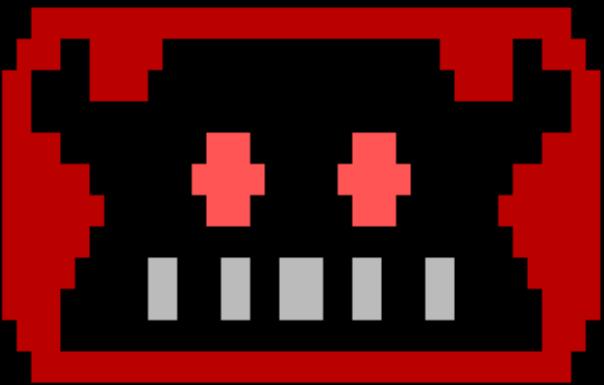

woensdag 5 februari 2020, 14:34 door Redactie, 66 reacties  
Laatst bijgewerkt: 05-02-2020, 15:59

De aanvaller die systemen van de Universiteit Maastricht met ransomware infecteerde wist binnen te komen via een **phishingmail** en verouderde software. Daarnaast heeft de universiteit 197.000 euro losgeld betaald dat de aanvaller vroeg voor het ontsleutelen van bestanden. Dat lieten de universiteit en securitybedrijf Fox-IT vandaag weten tijdens een **symposium** over de ransomware-aanval dat de universiteit organiseerde.

De aanvaller verstuurde op 15 en 16 oktober e-mails met het onderwerp "Documents" die naar een kwaadardig document linkten. Via dit document, waarvan hieronder een screenshot is te zien, werd het eerste systeem op 15 oktober besmet. Door een ongepatcht besturingssysteem op twee servers kon de aanvaller vervolgens op 21 november het volledige netwerk compromitteren en zich lateraal door het netwerk bewegen. Op deze twee servers waren bepaalde beveiligingsupdates niet doorgevoerd. Om welke verouderd besturingssysteem het ging is niet gemeld.

# Ease The Pain

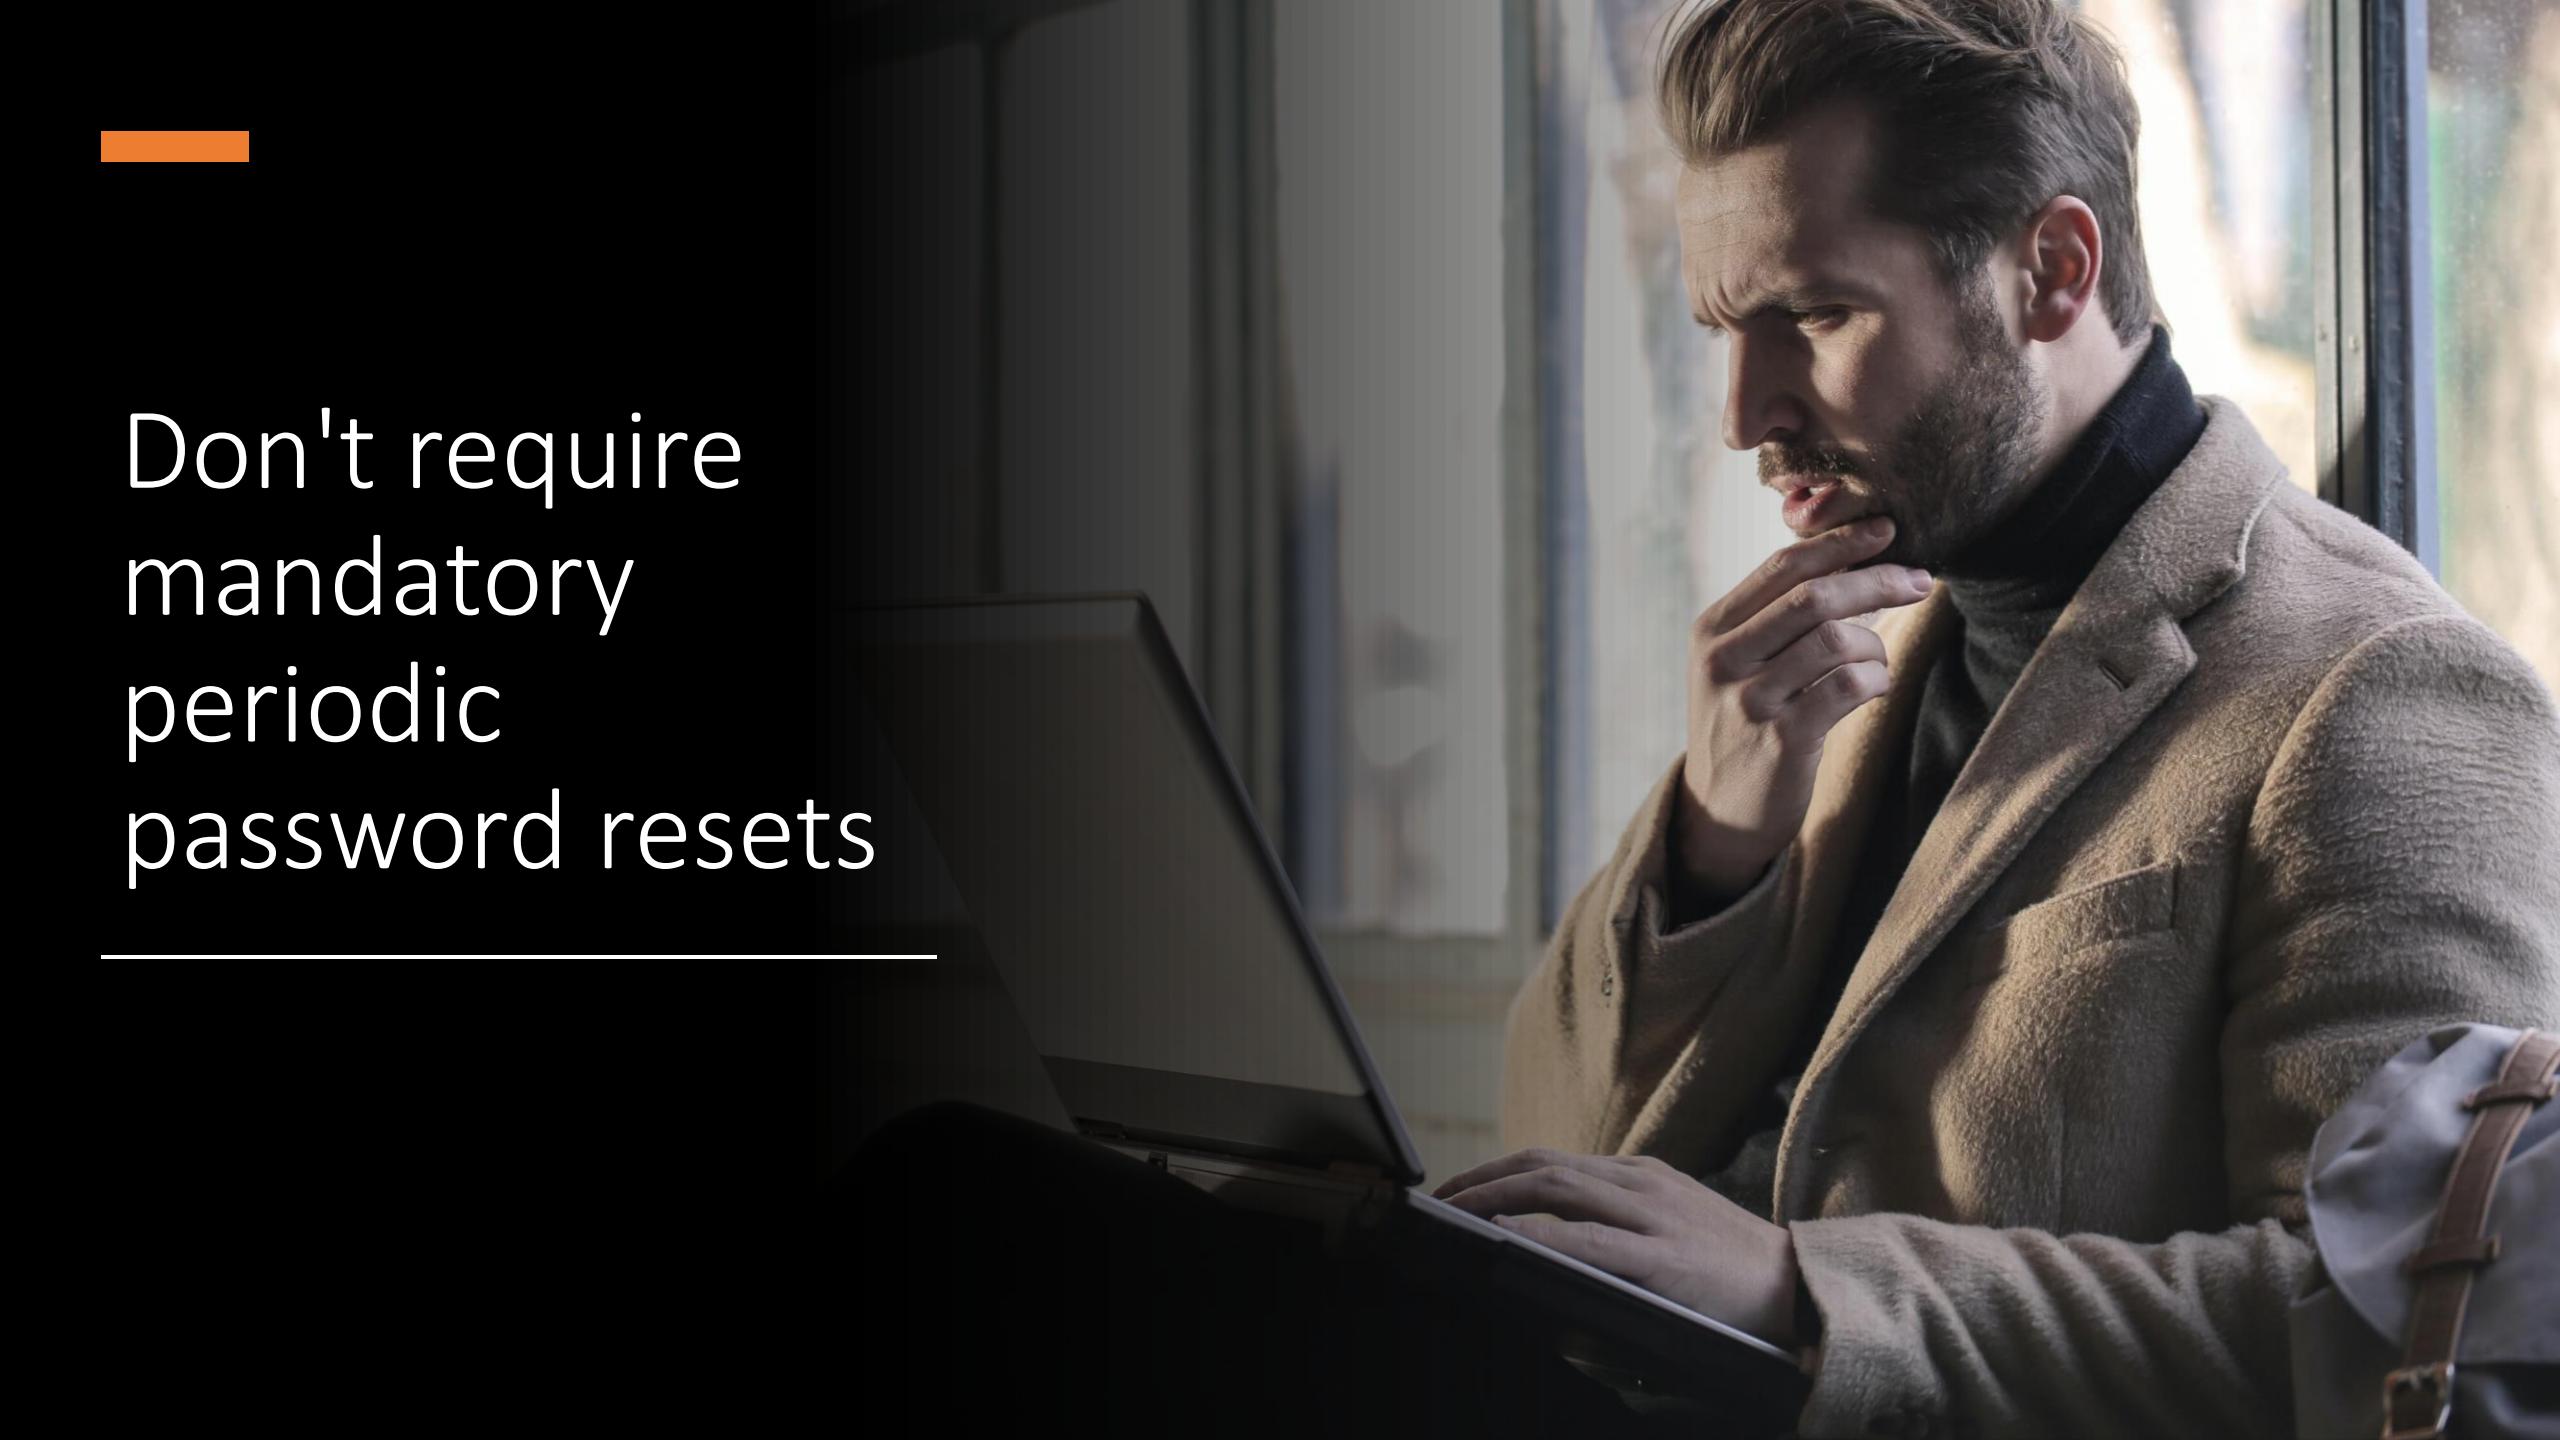

Use  
Passphrases  
Instead of  
Passwords

---

The background image shows a close-up of a combination lock mechanism and a printed circuit board (PCB). The lock's dials are visible, showing numbers 1 through 5. The PCB below it is dark with various electronic components, resistors, and capacitors. The lighting is dramatic, highlighting the metallic parts of the lock and the intricate patterns on the PCB.

Turn on MFA

---

A man with a beard and short hair, wearing a light-colored coat over a dark turtleneck, sits at a desk looking down at an open laptop. He has his right hand near his chin, appearing to be in deep thought or concentration. The background is slightly blurred, showing what looks like a window with a view of the outdoors.

### Provide support for YubiKey / FIDO as the MFA

Many other services (Google Apps, Facebook etc) now allow this and would be great to have in Azure AD.

<https://www.yubico.com/about/background/fido/>

Ian McDonald shared this idea · April 04, 2017 · [Flag idea as inappropriate...](#)

PLANNED

· **Azure AD Team** (Product Manager, Microsoft Azure) responded · July 25, 2020

Azure AD now supports FIDO2 security keys in public preview. We're working on allowing them to be used as a second factor as well (today they are used only first in sequence, but they satisfy MFA).
